How to register iOS device to Azure AD

I want to register Windows 10 and iOS devices in Azure AD. Can I enroll an iOS device in Azure AD without working with Intune? How do I register my iOS device?

@13909236 (/answers/users/3186840/13909236.html) Thanks for reaching out. We can register the IOS device to Azure AD in two ways, you can use either Authenticator App or use Microsoft Company Portal.

If you use company portal, your device will end up getting enrolled with Microsoft Intune (MDM) and registered to Azure AD. If you want the device just to be Azure AD registered, you can do that by using Microsoft Authenticator App.

Here are the steps you can follow :

- 1) Download the Authenticator App from App store from this URL https://apps.apple.com/in/app/microsoft-authenticator/id983156458 (https://apps.apple.com/in/app/microsoft-authenticator/id983156458)
- 2) Go to settings and look for Device Registration :

Thank you very much.
I was able to register my iOS device with Azure AD as expected.
