I've been programming for nearly 40 years; for half that time I've mostly been using C# and .NET, and I swear it just keeps getting better. Right now I'm working on a web app, a SaaS API, a Visual Studio extension, some serverless functions, and a game for iOS and Android, and I'm doing all of that in C#.

"THAT'S WHY I LOVE .NET."

Favorite song to listen to:

No Dice – Blanck Mass

"I LOVE .NET"

...because I can use it to develop apps for everything I want to target: desktop, mobile, server-side websites, and even SPA-style websites. With .NET, I can take my libraries with me across environments and won't need to rewrite them in another language.
