Upcoming changes to Teams meeting recordings

Jim Warner – Technical Specialist

# Teams meeting recordings saved to OneDrive and SharePoint instead of Stream

- [Use OneDrive for Business and SharePoint Online for meeting recordings - Microsoft Teams | Microsoft Docs](#)
- Starting August 16, 2021, all Teams meeting recordings will be saved to OneDrive for Business and SharePoint by default.
- When this change rolls out, the Teams RecordingStorageMode policy will be ignored.
- Administrators will no longer be able to opt-out. It will no longer be possible for Teams meeting recordings to be saved in Stream.
- We recommend that customers roll this feature out before this date so that they can control the timing of the release.
- The videos that currently live in Stream (classic) will stay there until a future migration tool is available to move them to OneDrive and SharePoint Online.

# TMR Documentation

## Admin docs

- [What's New for Microsoft Teams Meeting Recordings?](#)
- [Use OneDrive for Business and SharePoint or Stream for meeting recordings](#)
- [The new Microsoft Stream](#)
- [FAQs about moving to the new Microsoft Stream](#)
- [Teams cloud meeting recording prerequisites](#)
- [Set the default storage space for OneDrive users](#)
- [SharePoint limits](#)
- [Microsoft Stream \(classic\) storage limits](#)
- [Upload a Microsoft Teams meeting recording to Stream \(A1/A1 Plus users\)](#)

## End-user docs

- [Record a meeting in Teams](#)
- [Play and share a meeting recording in Teams](#)
- [Delete a meeting recording in Teams](#)

# Benefits

- Retention policies for Teams meeting recording (TMR) (S+C E5 auto retention labels)
- Benefit from OneDrive for Business and SharePoint information governance
- Easy to set permissions and sharing
- Share recordings with guests (external users) with explicit share only
- Request access flow
- Provide OneDrive for Business and SharePoint shared links
- Increased quota
- Meeting recordings are available faster
- Go local tenant support
- Multi-geo support - recordings are stored in a region specific to that user
- Bring your own key (BYOK) support
- Improved Transcript quality and speaker attribution

# Limitations

- There will be English-only closed captions and transcripts.
- You won't be able to search transcripts or their content.
- You won't be able to edit the transcripts, but you'll be able to toggle captions off/on.
- You will not get an email when the recording finishes saving, but the recording will appear in the meeting chat once it's finished. This will happen much quicker than it did in Stream previously.
- The OneDrive player will be used for meetings recording playback. Features such as 1.5x playback will not be available. A new player will launch in early 2021 that includes this functionality.
