

```

REM
REM   Updates the 'hosts' file from S:\Filing Cabinet\I\internal\Configuration Files
REM   Assumes S: is a Mapped Drive to \\internal240\internal
REM   IMPORTANT NOTE. This MUST be 'run as administrator'
REM
REM   Variable Definitions
REM
REM   PMHOST      The Computer Name
REM   PMJNAME     The Name of this Job.
REM   PMJSTEP     The Step Name within this Job.
REM   PMRC       The Return Code
REM   PMYYYY      The current Year
REM   PMMM        The current Month
REM   PMDD        The current Day
REM   PMSRC       The Root of the Source Directory, or File
REM   PMDST       The Root of the Destination Directory, or File
REM   PMJL        The Job Log File
REM   PMJDL       The Job Diagnostic Log File
REM   USERPROFILE Declared at logon time
REM
REM   Declare Variables
REM
SET PMHOST=%COMPUTERNAME%
